DETAILED ACTION

Response to Arguments

1. In view of the Appeal Brief filed on July 1, 2004, PROSECUTION IS HEREBY REOPENED. New grounds of rejection is set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

- (1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,
 - (2) request reinstatement of the appeal.

If reinstatement of the appeal is requested, such request must be accompanied by a supplemental appeal brief, but no new amendments, affidavits (37 CFR 1.130, 1.131 or 1.132) or other evidence are permitted. See 37 CFR 1.193(b)(2).

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1, 3-6, and 8-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Kimura (US Pat 5,192,883).

Regarding claims 1 and 6, Kimura discloses a system, comprising:

Art Unit: 2818

a processor (col. 4, lines 28 – 34, un-shown CPU);

a power supply coupled to the processor (col. 2, line 57 – col. 3, line 13, as power supply is present in the system, which is inherently supplying power to all the active components, including a CPU); and

a device (fig. 5, 150) coupled to the processor and the power supply and comprising:

an internal power supply bus configured to receive a power signal from the power supply

(fig. 5, Vc); and

an isolation circuit (fig. 5, 102) configured to disconnect the internal power supply bus from the power supply by interrupting the flow of the power signal when a standby mode is indicated by a control signal received at the isolation circuit (fig. 5, control signal VBC when being low turn isolation transistor 102 off, col. 1, lines 20 - 33, '... transistor 102 adapted to connect/cut off the supply voltage Vc).

Regarding claims 3 and 4, Kimura also suggests the system as set forth in claim 1, wherein the system is a PDA or a handheld computer (col. 1, lines 14 – 17, applications of device include a laptop or high speed small recording medium of detachable type—which includes PDA).

Regarding claim 5, Kimura discloses the system as set forth in claim 1, wherein the device comprises a memory device (fig. 5, 101).

Regarding claim 8, Kimura discloses the system as set forth in claim 1, comprising an input buffer comprising a control line configured to control the isolation circuit (fig. 5, input buffer including inverter 106, which buffers the control signal to the isolation transistor 102).

Art Unit: 2818

Regarding claim 9, Kimura further discloses the system as set forth in claim 8, wherein the isolation circuit is a p-channel transistor (fig. 5, 102 is a p-channel transistor).

Regarding claim 10, Kimura also shows the system as set forth in claim 9, wherein the gate of the p-channel transistor is coupled to the control line of the input buffer (fig. 5, control signal is VBC is coupled to the gate of isolation transistor 102).

Regarding claim 11, Kimura further discloses the system as set forth in claim 1, comprising an output buffer configured to buffer the device from the remainder of the system (fig. 5, output buffers include 107 and 108).

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kimura in view of Confalonieri et al. (US Pat 5,638,330).

Regarding claim 2, Kimura discloses the system as set forth in claim 2, except wherein the system is a cellular phone. This is however shown by Confalonieri et al. (col. 2. lines 55 – 60). Therefore, it is considered obvious to one of ordinary skill in the art, at the time the invention was made, to include the application shown by Confalonieri et al. to the disclosure by Kimura, to reduce the power down consumption in portable devices (col. 2, lines 52 – 54).

Art Unit: 2818

6. Claims 7 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kimura in view of Hoffman et al. (US Pat 5,117,129).

Regarding claim 7, Kimura discloses the system as claimed in claim 1, except wherein the isolation circuit is coupled between a pad on the device configured to receive the power signal and the internal power supply bus. This feature is however shown by Hoffman et al. (fig. 3a. PAD connects to supply line 150 connecting to isolation p-mos transistor 158). Therefore, it is considered obvious to one of ordinary skill in the art, at the time the invention was made, to include the feature shown by Hoffman et al. to the disclosure of Kimura to provide stable drive to loads, col. 2, lines 30 - 38).

Regarding claim 12, although Kimura did not disclose, in addition to claim 1, an I/O pad and circuitry coupled between the output buffer and the I/O pad to tri-state the I/O pad. The feature is nevertheless shown by Hoffman et al. (fig. 3a, I/O pad 152 for tri-stating configuration, col. 3, lines 25 - 36).

Conclusion

- The prior art made of record and not relied upon is considered pertinent to applicant's 7. disclosure.
- When responding to the office action, Applicant(s) are advised to provide the examiner 8. with the page and line numbers in the application and/or references cited to assist the examiner to locate the appropriate paragraphs.

Application/Control Number: 09/942,898

Art Unit: 2818

9.

A shortened statutory period for response to this action is set to expire 3 (three) months

Page 6

and 0 (zero) day from the date of this letter. Failure to respond within the period for response

will cause the application to become abandoned (see MPEP 710.02(b)).

10. Any inquiry concerning this communication on earlier communications from the

examiner should be directed to Ly Pham, whose telephone number is 571-272-1793. The

examiner can normally be reached on Monday - Friday from 8:30am to 5:00pm, alternate Friday

off. The examiner's supervisor, David Nelms, can be reached at 571-272-1787. The fax number

for the organization where this application or proceeding is assigned is 703-872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding

should be directed to the receptionist whose telephone number is 703-308-0956.
